Versatility

All of the Sipromac Vacuum Tray Sealers can use a variety of standard preformed, heat sealable trays, made from mono or multilayer materials including: foam, plastic or sealable board. Our factory can, at any time, design and manufacture a custom die for use with your special size tray. All dies are interchangeable between TS-30 and TS-70 allowing you to grow with your equipment while at the same time limiting your investment.

Sipromac manufactures a world of leading equipment such as vacuum and gas packaging systems, Smokehouses, vacuum massagers, and shrink tunnels.

Sipromac and its authorized distributor network are always increasing quality and service with new innovative ideas and technical support. Call now and ask for details or visit our web sites.

New Technology

For several years now "Case Ready" has been a concept for the entire food industry. Now it's a reality! The new line of Sipromac Vacuum Tray Sealers will package a wide variety of fresh, frozen or processed products that will be sold in a clean, safe, appealing, "case ready" container. Premanufactured trays are available in a wide range of sizes, shapes and colors and can be produced from a variety of materials.

Anyone packaging a food product can enhance both the quality and value of that product by using one of the Sipromac Tray Sealing. M.A.P. (modified atmosphere packaging) machines. This application will provide a controlled oxygen level ensuring product freshness for a longer period of time in an esthetically appealing package.

If you are looking to package fresh or frozen prepared meals, create a "Case Ready" or home meal replacement program or extend the shelf life of snack foods, TV dinners or other fresh food items, be sure to give us a call to find out more about our quality Vacuum Tray Sealers.

Model TS-30

The TS-30 has been designed for small and medium size food processors. This semi automatic system allows you to vacuum, gas, seal and cut using a wide variety of trays in various shapes and sizes. The operator, during each cycle, is only required to load and unload the drawer of the machine. Ideal for smaller operations, this space saving unit will deliver the same quality packages as larger more automated systems. Its unique stainless steel robust construction design is ideal for the food industry. The Model TS-30 is the right choice when launching new product lines, developing new packaging ideas or when you just need to safely package your current production.

The TS-30 is easily accessible from all sides which helps to reduce maintenance and service time. Tooling dies can be easily changed in 10-15 minutes, without the use of special tools, and are all precisely manufactured by Sipromac according to your tray specifications.

Model TS-70

This Automatic Tray Pack System will bring automation and productivity to your packaging room. The operator is only required to feed trays on the machine conveyor. The TS-70 then advances the trays into the Vacuum/Gas chamber and once the cycle is completed the package is automatically transferred to the unloading discharge conveyor. It is also possible to automatically place trays on the in feed conveyor by ordering the optional tray loading system.

The Model TS-70 comes fully equipped with the following standard items: trim rewind system, photo eye indexer and Busch Vacuum Pump. The control system has interfaces and can synchronize signals sent by other equipment that is in line (ex: automatic filling system). Very compact, the TS-70 will speed up your production, reduce your labor costs and provide a high quality package which will lead to increased profits for your company.

Innovative Design

The Sipromac MC-40 microprocessing control panel allows you to precisely and easily set: vacuum and gas levels, dual temperature controllers, gas plus time, sealing time and the product name. Up to 20 programs can be stored in the boards memory and the operating and diagnostic menus are standard. The TS-30 and TS-70 both come equipped with the MC-40 control as a standard feature.

Cleaning procedures are a must in today's food processing plants. Thanks to our 15 years of experience in the design and manufacturing of packaging equipment, all of our tray sealing units can be cleaned easily and safely in a short period of time. The stainless steel design brings durability, cleanability and reliability into any rigorous environment within a food processing operation.

Unique design of Sipromac dies make them simple to install without the use of special tool. These quickly and easily accessible dies are interchangeable between the Models TS-30 and TS-70. This allows you to move from one machine to the other without a loss on your investment. Perimeter sealing and knife cut off are standard on all regular shaped trays and our toolings are factory adjusted to perfectly fit your specific tray and film requirements.

Maintenance and Service are made easy due to the simplicity of our design and the clear access to all areas of the machine. Sipromac only uses premium quality parts which guarantees easy accessibility. These include Busch Vacuum Pumps, Schneider/Square D electrical components, Asco Valves etc. Parts and service are readily available, preventing extended down time, through our network of distributors located throughout the US, Canada and Mexico. Sipromac also provides a full one year warranty on all of our machines. Please give us a call today for additional information and the location of our qualified distributor in your area.
